

Vetvice

Cubicle

A sophisticated design jointly developed with Vetvice for maximum freedom!
A very open cubicle, who allows a forward and lateral head swing movement.

The Vetvice Cubicle has a lot to offer:

Advantages

- ⇒ The cow will be send in a straight position, which avoid lying diagonal and cubicles stay cleaner.
- ⇒ A possibly tree head on a high of 1 meter gives no barrier for the cow during the rise, but prevents that the cows walks around the cubicles.
- ⇒ A high placed tree withers.
- ⇒ Every cubicle is attached to a standpipe, so that the farmer based on experience, height of the cows and chosen bedding can adapt the height of the cubicles.

Box cover

At cow mattresses is the impression of reliability important. To have enough grip to lying down and get up, the cow may well turn off the mattress. Also is the cow lying comfortable. A rounded brisket board about 15 cm high above the box cover teaches the cow in a friendly way to lie in the back of the box.

The correct dimensions are decided by the size of the cows. You can find the tables on our website. The average Dutch cow is lying gladly in a box of 1,20 meters wide, 2,50 meters long or 3,00 meters long against the side and equipped with a lounger by 1,80 meters long.
